

Sand Springs Population Density by Census Block Group

Source: Geography 2012 census block groups
 Methodology: ACS 2014-2018 estimate divided by total square miles of the block group to get persons per square mile

Sand Springs Population Density by Census Blocks

Persons Per Acres

- Less than 4.00
- 4.00 to 9.99
- 10.00 to 24.99
- 25.00 to 59.99
- 60.00 or Greater
- Sand Springs Corporate Limits
- Water Bodies
- Highways
- Major Arterials
- Streets

Source: Geography 2010 census blocks
 Methodology: Determined the distribution of population at the block level by dividing 2010 block population by the corresponding block group. This number was then multiplied by the 2014-2018 block group population estimate to get an updated block level population estimate. Then divided the updated estimate by total acres of the block to get persons per acre.

0 0.5 1 Miles
